

Super-Duper Slime

Introduction: In this experiment, we are going to teach you how to make your own slime, at home, for you to play with and enjoy.

Approximate Time: 30 minutes

Materials:

- School glue
- Water
- Baking Soda
- Measuring Spoons
- Measuring Cup
- Bowl (For Mixing)
- Spatula
- Contact Lens Solution (Needs to contain boric acid and sodium borate)
- Resealable Plastic Bag or Container (To store your new creation)
- Food Coloring (Optional Effect)

Procedure:

1. Into your mixing bowl, combine $\frac{1}{2}$ cup of water and $\frac{1}{2}$ cup of glue and mix.
2. If you would like to, feel free to add some food coloring to this water and glue liquid and mix the solution again.
3. Add $\frac{1}{2}$ tsp of baking soda then mix it in.
4. Add 2 tbsp of your contact lens solution, then stir your creation.
5. Continue to stir until your mixture gets thicker and begins to pull away from the edges of the bowl.
6. Knead the slime in your hands for a couple of minutes. If your slime is too sticky, don't worry, continue to knead, the slime will eventually get thicker.

Tips & Tricks:

- You can add things to make it sparkle, change colors, become magnetic, or even glow in the dark.
